

The Scope of UDesign

The scope of UDesign is outlined below. Should your design require services outside of this scope, you may request custom integration. If your submitted design falls outside of this scope we will notify you of your options.

General. UDesign converts a website design into a set of design templates that function on our content management system.

Number of templates. UDesign includes the cutup and implementation of two design templates. This includes a home page and an internal page template that you can design. We will create an admin template for the system to use based upon your design.

Basic element styles. The system has a built-in style sheet for all of its elements. However, the default look might not match your designed templates. **If you do not want the default look, you may specify in your design how you want the following elements to look:**

- ✓ Blog: including list view and the contents of the blog detail page.
- ✓ Calendar: including list view and the contents of the calendar detail page.
- ✓ Forms: including titles and selected fields.
- ✓ Search: including the search box and button
- ✓ Files and links.

Text Styles.

You may specify styles for:

- ✓ Up to five headers
- ✓ One body text style
- ✓ One link style (this includes normal, active, visited, and hover states)
- ✓ Ten classes for use in the CMS editor (can include colors, fonts, font style, font size, etc.)

Navigation. You can design a look for the top/root menu navigation as well as an internal/side navigation. We will style up to three levels of navigation, including your root/main navigation. **Note:** fly out navigation menus may only include the main nav and one sub-navigation level.

Custom integration of 3rd party tools. UDesign does not include custom integration of any 3rd party tools such as newsletter lists, shopping carts, javascript or Flash slideshows . . . etc.

Supported Browsers. We support: Firefox 2+, Safari, IE 7, and IE 6 (please note that IE6, created in 2001, does not support advances in CSS and scripting. We will do our best to make sure it degrades gracefully, but we cannot guarantee the same level of consistency in this browser).

Files and Technical Requirements

This section contains requirements for your submitted design files. If your files do not meet these requirements, they may be returned for you to correct and resubmit.

- ✓ **File Type:** PSD, or PNG (with layers, please -- no flat images)
- ✓ **Color:** RGB (not CMYK)
- ✓ **Web-safe fonts:** If you're using non-websafe fonts in your design, please send them with your files. Remember that text-content can only be output in web-safe fonts. [Here is a list of websafe fonts](#) to guide you in your font selection.
- ✓ **Resolution:** 72 dpi and set to the exact pixel dimensions you desire for your website.
